

HEAVY DUTY TRUCK PARTS DISTRIBUTION

“Over 600 warehouse distribution locations across the United States, Canada, Mexico and Puerto Rico”.

Key Suppliers:

North America’s largest heavy duty truck parts GPO, comprised of over 600 locations across the United States, Canada, Mexico, and Puerto Rico has been utilizing NEXTStep’s e-commerce software and professional services for the past 15 years. Our client’s enterprise solution features several GPO application modules, which have been “tailored to fit” their unique feature and function requirements. Over 125 warehouse distributors and 75 of the major heavy duty parts suppliers participate in the program. Over 500,000 EDI e-procurement documents are exchanged annually through NEXTStep’s GPO B2B Exchange.

NEXTStep’s GPO software applications support their most critical business processes including rebate management, online communications & information sharing, data analysis and reporting, trading network help desk, b2b document exchange, trading partner integration services, and more.

NEXTStep’s GPO solutions also enable our client to do business as a GPO Fulfillment Network, banding all member companies together to exchange e-procurement transaction sets with some of the country’s largest national trucking fleets. We also supply our client’s public b2c solution, tailoring the NXT-Cloud® GPO Marketplace to enable participating members to market and sell their products online under one brand national distribution/fulfillment network.

NEXTStep is proud to have worked with our flagship client for the past 15 years; contributing to their 4-fold growth and leadership in HD Parts Distribution.
