

MEDICAL TRANSPORTATION MANAGEMENT

A GPO startup in the Medical Transportation Management industry approached NEXTStep to help implement a GPO solution, which could support the major administrative, management, and technology requirements of their new buying group organization. The group’s approach is to deploy a private multi-vendor marketplace for their company-owned vehicle repair facilities and network of over 15,000 independent vehicle owner-operators. Their marketplace is currently being populated with essential business products and services from nearly 50 vendors, supporting: facility security, computers & electronics, insurance, monitoring services, office supplies, shipping services, software, tires, training, uniforms, vehicle leasing, vehicle parts & repair services, and more.

NEXTStep’s NXT-Cloud® GPO Marketplace has been implemented to support our client’s private marketplace/shopping mall requirements; supporting both internally populated webstores and punch-out to externally hosted vendor catalogs. NXT-Cloud® Portal provides the group with secure access to critical business information such as member purchases and rebates earnings performance, data analytics & reporting tools, preferred supplier program incentives and requirements, monthly specials & promotions, and more.

Additionally, the NXT-Cloud® Rebates application is used to manage preferred supplier rebate and incentive programs requirements including rebate receivables management, statement upload, data analytics, report distribution to members, and data exchange with internal back-office systems.
