+ GPO Next Day Pay

Functionality:

+ Universal Site Shopping

+ 4 Complete Product Lines

+ J. D. Edwards® Integration

+ GPO Data Warehouse

+ Data Analytics & Reporting

+ Central Billing Support

+ Central Payment

Our client in the Refuse Collection & Environmental Services industry approached NEXTStep to implement a private online marketplace, which would enable its member network to procure products online from national distribution centers via a single website. The e-business solution required seamless integration with their J.D. Edwards® EnterpriseOne® procurement platform; supporting unattended daily updates of item content, pricing, real-time product availability, and more. The solution also needed to exchange online orders in a custom flat file format and auto-forward an Adobe® PDF courtesy copy of each order to both buyer & seller.

NEXTStep's NXT-Cloud® GPO Marketplace has been implemented to support the private marketplace/shopping mall requirements, enabling cloud-based online ordering to our client's four (4) major product lines. Several thousand online orders are placed each month and managed through the platform.

NXT-Cloud® GPO B2B Exchange supports the electronic document exchange of orders between the marketplace and their procurement platform. All order content is extracted, transformed, and loaded (ETL) into the GPO Data Warehouse; from which on-demand data analysis and reporting functionality is made available to their management team. Google® Analytics connectivity is provided to analyze sales trends.

NXT-Cloud® GPO Central Bill and GPO Next Day Pay modules provide 3rd party guaranteed payment of invoices within term; improving business cash flow and minimizing non-payment risk to our client.
